5230
The two-and-a-half-story brick house at ~~5320~~ Ballenger Creek Pike was constructed ca. 1880. The building faces east toward the road, which is visible just beyond a short allee formed by two rows of mature trees. The building is five bays wide and five bays deep. The dwelling occupies a tee-shaped footprint composed of the main block and a rear ell. The building features eight-to-one common bond brick. The building terminates in a hipped roof sheathed in composition shingles. The building features a pair of octagonal corner turrets topped by conical roofs that flank the front facade of the main block. An interior brick chimney is located on the south facade. The building features one-over-one-light, wood-sash windows on the principal (east) facade and two-over-two-light, wood-sash windows on the side elevations.

The building's principal (east) facade is symmetrical and features a central entrance containing a wood four-panel door. At the attic level, the corner turrets feature windows. The central gabled dormer contains a Palladian window. The Palladian window contains a six-over-six-light, wood-sash window with a round-arched lintel flanked by one-over-one-light, wood-sash windows.

NR-ELIBILITY REVIEW FORM**

Continuation Sheet No. 1

The main block of the building extends to a depth of two bays, while a four-bay ell continues the building to the rear (west). The ell's side facades feature entrances containing four-panel wood doors with transoms, two on the south and one on the north facade. The ell's south facade also features a one-story full-width balcony. The balcony features square posts and a balustrade of square balusters.

Three outbuildings are located south of the main house. A one-story brick storage building features a gable roof with a stepped parapet. The building is three bays wide and four bays deep. The building's principal (east) facade features a central entrance containing a six-panel wood door. The window openings feature wood lintels and brick sills, and contain one-over-one double-hung wood sash. Two brick chimneys are located on the north elevation.

A second one-story outbuilding stands south of the first. The principal (east) facade of the building features a stepped parapet. The building is two bays wide and adopts an L-shaped footprint. The building is constructed of concrete block with a front facade faced in brick. The building terminates in a gabled roof sheathed in standing-seam metal roofing.

The third outbuilding, constructed ca. 1960, stands east of the second and appears to be a small factory or warehouse. The two-story building is constructed of concrete block. The building features a flat roof. The building's walls are blind. A wood addition is appended to the building's south facade.

Stylistic evidence including the building's octagonal towers appear to date the main house to ca. 1880. Jacob Lewis bought 145 acres on which the building stands from Lewis G. Kemp in 1867 (Frederick County Land Records DSB1-864). The property passed through a series of owners in the latter part of the century: Henry C. Drill in 1869 (FCLR CM3-411), Robert Lease in 1875 (FCLR TG2-685), George W. Myers in 1883 (FCLR AF7-79), and William O. Michael in 1909 (FCLR STH287-238). Michael sold off portions of the property, reducing the current property to about 32 acres. The property passed from Michael's family to Victor H. and Mildred T. Schwenketer in 1953 (FCLR LS12-10), and the Schwenketers sold the property to Microbiological Associates, Inc., in 1958 (FCLR 597-261). The biological sciences firm merged with Dynasciences Corporation, a military equipment developer, in 1972; Dynasciences sold the property to its current owner, Hugh T. McConnell, in 1977 (FCLR 1016-364).

The farm complex at ⁵²³⁰~~5320~~ Ballenger Creek Pike, whose main house exhibits design elements of late-nineteenth-century romantic vernacular architecture as applied to farmhouses in Frederick County, possesses significance under criterion C for listing in the National Register of Historic Places. The complex retains its integrity of location, setting, feeling, association, materials, workmanship and design.

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

Constructed in approximately 1910, the house is a large two story brick residence laid in common bond which faces east from the west side of Ballenger Creek Pike. The residence is built on a low random stone foundation. The principle façade is nine bays wide; the main entrance, a panelled door with circular medallion decoration, three light transom and two side lights is located in the fifth bay. The remaining bays are 1/1 windows with double header arches.

The front of the building is dominated by two large three story pentagonal turrets in the north and southeast corners. Small celestroy windows are located in the third level of the turrets. Both turrets are covered by asphalt pryamidal roofs with finials.

The two story open porch on the rear ell has deteriorated.

The dwelling is relatively intact and demonstrates a distinct form for the area.

There are three outbuildings on the property, one of recent construction, the remaining two are contemporary with the main building, but have been altered extensively and no longer retain structural integrity.

Information from MIHP and Janet Davis, Frederick County.

Microbiological Associates Building
Buckeystown
Private

C. 1905

The Microbiological Associates Building is a large two story brick residence, nine bays wide. The main entrance, located in the fifth bay, is a paneled door with circular medallian decoration, three light transom and two side lights. The remaining bays are 1/1 windows with double header arches.

This brick house provides a change in the architectural style most often found used for farmhouses in the Adamstown region. Most farm residences built in the late nineteenth century are two and one-half story frame buildings with a center gable and two story open porch to the rear. This building has included the regional two story open porch in the rear, but connected it to a two and one-half story common bond brick main blocks with turrets. From the texture, quality and color of the bricks, it is most likely that they are bricks baked at the Baker Yards in Buckeystown.

DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

This house is a large two story brick residence laid in common bond which faces east from the west side of Ballenger Creek Pike. The principle facade is nine bays wide; the main entrance, a panelled door with circular medallion decoration, three light transom and two side lights is located in the fifth bay. The remaining bays are 1/1 windows with double header arches.

The front of the building is dominated by two large three story pentagonal turrets which set in the north and southeast corners of the building. Small clerestory windows are located in the third level of the turrets. Both turrets are covered by asphalt pyramidal roofs with finials. A front gable with arched window extends from the hipped roof.

The building extends to the rear (west side), six bays deep. Double hung 2/2 windows occupy each bay. An entranceway is located in the third bay. A two story open porch extends along the entire south side of the building.

The residence is built on a low random stone foundation; the asphalt hipped roof is attached to the building by a plain boxed cornice with plain frieze.

One corbeled brick chimney is located immediately behind the turret in the southeast corner.

STATEMENT OF SIGNIFICANCE

This brickhouse provides a change in the architectural style most often found used for farmhouses in the Adamstown region. Most farm residences in the area are two and one-half story frame buildings with a center gable and two story open porch to the rear. This building has included the regional two story open porch in the rear, but connected it to a two and a half story common brick main block with turrets. The building displays a higher style of architecture than usually found in the rural areas of the county. From the texture, quality and color of the bricks, it is most likely that they are bricks baked at the Baker Yards in Buckeystown.
